Introduction

List distinguishing between household and industrial packaging (Grey list)

This list was compiled to help you distinguish between household packaging, which requires a detailed or simplified declaration, and industrial packaging, which requires an industrial declaration.

Definitions:

Household packaging waste:

- Packaging waste generated by the normal activity of household.

Industrial packaging waste:

- All packaging waste not considered as household packaging waste. This includes packaging designed exclusively for professionals, industry, communities, schools, hospitals, etc.

Application:

Primary packaging can be either household or industrial. The distinction is made using the grey list below:

- Examples of **industrial** packaging: Metal barrels, packaging for electric motors, cement bags >10 kg, sauce packaging >10 kg, etc.
- Examples of **household** packaging: Beverage cans, TV packaging, cement bags ≤10 kg, sauce packaging ≤10 kg

Secondary packaging is industrial packaging

- Exceptions (to be declared as household packaging):
 - Multipacks of household products
 - Parcels intended for households

Tertiary and transport packaging is industrial packaging

The list of distinctions below is a supplement to the definition and is not exhaustive. In case of application difficulties, it is recommended to contact Valorlux.

- If the above limit values are exceeded owing to promotional offers on products destined for the normal functioning of households, the packaging remains household. E.g.: cups of milk, cups of butter.
- Portion packs of ordinary household products for direct consumption, the quantity of which is provided for one use only, household packaging. The classification of the sales unit in which these portion packs are offered shall be determined according to the above list. E.g.: paint + dye.
- Is considered industrial regardless of weight and/or volume: primary packaging of products clearly intended due to the nature or composition of the product for professional or industrial activities. E.g.: beer keg.
- The primary packaging of products that are individually wrapped to meet hygiene requirements and that are intended to be cut or packaged, is considered to be industrial.
- The packaging, including service packaging, which is used to offer ready meals to consumers is always considered to be household. E.g.: the packaging for a hamburger in a fast food restaurant, catering, self-service restaurants.
